What matters most

Technology and Office Supplies are carrying profitability, while Furniture remains the main drag. Tables are the clearest loss leader, so pricing and discount controls there will have the biggest impact. The forecast suggests the business should stay on a healthy revenue path if current seasonality continues.

Customer segmentation

The cluster model groups customers into distinct value bands based on recency, frequency, sales, profit, discounting, and shipping behavior. That lets you target high-value loyal customers, recover at-risk buyers, and separate discount-sensitive buyers from healthy margin customers.
